EXAMINER'S ACTION

Serial No. 646,724 Art Unit 124

This application contains claims directed to the following patentably distinct species of the claimed invention:

Claims 9-10, 17 and 20 directed to non-heterocyclic species which are distinct from the heterocyclic derivatives of (a) benzothiophenes, (b) benzoturandes, (c) furanes and (d) thiophenes, e.g., and moreover, the same are not only separately classifiable but are also known to be patentably distinct form the aforementioned non-heterocyclic species.

Applicant is required under 35 U.S.C. 121 to elect, a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 3-5, 11-13, 15-16, 18-19 and 21-22 are generic.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a generic claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 of the other invention.
